

Cooperation agreement signed between FAAR Industry and GENARIS Group

The GENARIS Group, recently settled in new premises in MAGNY Les HAMEAUX, has created a cluster dedicated to SMEs.

Beyond the interest to share services and expertise, the cluster aims to provide:

- A range of experts capable to mobilize to develop new projects,
- A dynamic business for SMEs in the cluster to increase their reach and accelerate their development,
- An incubator for innovative projects in partnership with engineering and business schools.
- 3 SMEs are already installed:

The company METRA, a Group subsidiary, offering the following services:

- Photo-Geometric three-dimensional measurements, Non-Destructive Testing and Material soundness,
- Design, Instrumentation and integration of mechatronic systems and electronic board,
- Simulation calculations (static, dynamic and vibratory) with qualification tests.

BEPS www.beps.industrie.free.fr, a subsidiary of the group, is an engineering and industrial company working primarily in the automotive and aerospace markets.

VERTEXI www.vertexi.com, a research company specializing in fluid mechanics, reinforces the offer of simulation and numerical calculations.

FAAR Industry specializes in the development of embedded electronic systems from prototype to small series.

FAAR Industry is capable to offer its customers and partners the following products and services:

- A range of ECUs “off the shelf” for both development and production, for different kinds of applications
- a real-time development and prototyping tool chain that combines the advantage of « model based design» and automatic code generation. The tool chain is compatible with the whole range of proposed modules.
- software tools for programming, calibration and fine tuning
- A range of CAN and LIN communication interfaces
- Touch screen programmable display devices for prototyping and small series.
- Specialized engineering services, project management and training.
- Development of hardware communication gateways

In this context, the cooperation agreement signed on May 2, with the company FAAR Industry is a consolidation of the offer of design and manufacturing of demonstrators for the transportation sector and especially for the automotive market. The complementary skills and together with the range of resources creates a unique potential to design and manufacture global solutions dedicated to advanced research, design up to manufacturing of small series.
